

# INTRODUCTION

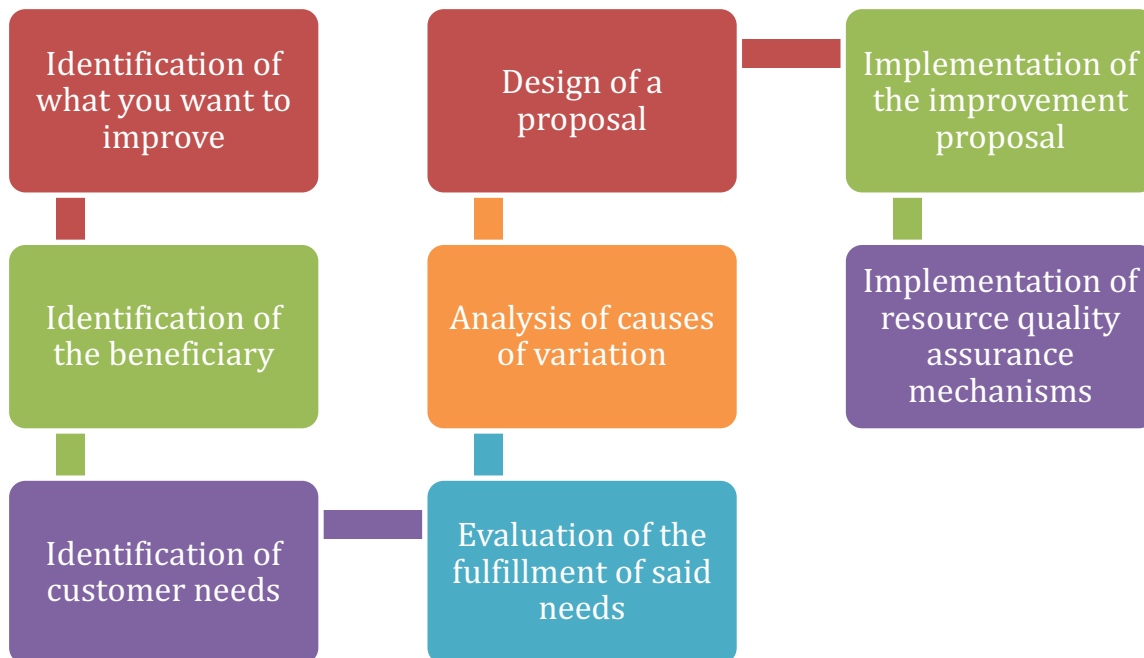

Continuous improvement is a process that is applied through a constant cycle and allows us to identify an area for improvement within the organization, as well as plan and implement activities, in addition to analyzing the results that help to take corrective measures based on them, helps the correction of errors and the definition of new objectives or stricter objectives that allow for further improvement.

The characteristics of continuous improvement in an organization are the following:

1. Includes all the employees and senior management of a company to solve problems constantly.
2. Determination of activities that allow products to be delivered at a better price, in shorter times and with maximum quality.
3. Establishment of the processes of change and permanent learning in the company.
4. It is based on work teams, which encourages the participation of all members of the organization.

# INTRODUCTION

The continuous improvement model is represented through the following diagram:
